©2018 KWIK LOK CORPORATION - ALL RIGHTS RESERVED

Kwik Lok® and Striplok® are Trademarks of Kwik Lok Corporation. The shape of the closure is protected by trademark registrations in many countries around the world.
GENERAL INFORMATION

Kwik Lok Corporation manufactures three sizes of closure-labels for supermarket bulk food sections. These labels permit the shopper to close the bag and mark bin numbers on the package.

The Kwik Lok bag closure gives the shopper a convenient and easy method of closing the bag. The label area permits easy marking of the bin number and assures legibility at the check-out stand.

The labels can be custom printed with bar codes, store logos, slogans or other copy and graphics. Contact us for pricing and information regarding custom printed labels.

LOK OPENING SIZES

Bulk food closures are supplied in either of two opening sizes which will accommodate most bulk food bags.

CLOSURE SPECIFICATIONS

Label Sizes:

- **SERIES CB**: 1-15/16” wide by 2-1/4” long (4.92 cm x 5.72 cm)

Minimum Order: .................................................................27,000
Approximate Shipping Weight: .........................27M Pack: 60 Lbs (27.2 Kg)
The standard Series L closure-label is printed on coated one-side tagboard. The front of the label is printed on the coated side. The coated side will permit the printing of brighter colors and sharp color illustrations.

Labels that will be printed with a printer mounted on the bag closing machine must be printed with the front on the uncoated side of the tagboard. This permits the ink to absorb into the material and prevents ink smears.

Uncoated papers are absorbent, so inks, varnishes and coatings perform differently than on coated papers. It is generally not a good idea to print four-color illustrations on the uncoated side of our tagboard.
SERIES U closure-labels can be printed in any number of colors on one or both sides. The label can be printed on our standard C1S Tagboard (10 pt, white), or a synthetic label material. It is available with the closure openings noted at the bottom of the page.

SEE APPENDIX FOR ADDITIONAL CLOSURE-LABEL PRINTING INFORMATION.

Kwik Lok® designed for the consumer

A Kwik Lok package is easy to open, no confusing twisted wire to unravel. The all-plastic Kwik Lok closure snaps off in a quick simple motion. Reclosing the bag is just as easy and that makes your package consumer friendly. Your product and its package are important. Why not use the best closure available?

Consumers are increasingly looking for package information such as “Sell By”, unit price, etc. Kwik Lok allows you to print this information right on the closure. It is always in the same place and easy to read. Information that is overprinted on the bag graphics can be hard to locate and read.

*Label Size........ 2-3/4” (6.99 cm) wide x 2-3/4” (6.99 cm) long*

**SERIES TFM CLOSURE-LABELS**

Series TFM closure-labels are designed to be used with Kwik Lok’s 865 Automatic and 087 Semiautomatic Bag Closing Machines, and the 898 Closure-Printer Separator. The label can be custom printed both sides. Closure glued to front of label.

**SERIES TM-220 CLOSURE-LABELS**

Series TM-220 closure-labels are designed to be printed, by the customer, with the 884 Thermal Printer. After printing, the labels are recoiled twice and can be used in Automatic and Semiautomatic Bag Closing Machine, as well as the 898 Closure-Printer Separator. The front of the label will face out, away from the package, towards the consumer. A trigger mark is printed on the front to activate the 884 Printer.
AUTOMATIC BAG CLOSURE-LABELS
Series TFM & TM-220

SERIES TFM and TM-220 closure-labels can be printed on our standard C1S Tagboard (10 pt, white), or a synthetic label material. They are available with the closure openings noted at the bottom of the page.

SEE APPENDIX FOR ADDITIONAL CLOSURE-LABEL PRINTING INFORMATION.

Packaged: ........................................ 1,000/roll, 7 rolls per carton (OC-0203) 7M
Minimum Order: ........................................ 42,000 (6 cartons)
Approximate Shipping Weight: ........................................ 7M Pack: 35 Lbs (15.9 Kg)
APPENDIX

BAG CLOSURE-LABEL INFORMATION

Kwik Lok can provide complete design services. A design mock-up can be provided at no charge, along with a quotation of all costs. Mock-up can be sent to the customer as a PDF digital file via e-mail. Using electronic PDF files allows fast, easy communications during the design process. A hard copy proof can be furnished as soon as the customer has accepted the final design. Press Proofs can be provided and shipped to the customer. Contact the production plant for Press Proof costs.

Kwik Lok closure-labels are printed on offset lithography presses. Printing inks used are 4-color process; spot colors are limited to Pantone Matching System (PMS) colors. All spot colors must be identified by PMS Numbers. The company contracts printing to outside vendors. Press check by customers, or their agent(s) is permitted and must be pre-arranged. The person making the press check must be authorized to sign-off on the press sheet.

DIGITAL ARTWORK: Customers wishing to provide their own art should send files in digital form. Kwik Lok supports the following applications: Adobe Illustrator, Adobe Photoshop and Adobe InDesign. Artwork provided in other formats should be saved as an eps file. Linked files MUST be included and provided as esp or tiff files. Files can be furnished on disk or sent by e-mail.

All artwork designed by Kwik Lok will remain the property of Kwik Lok Corporation and held for the exclusive use of the customer as long as the files remain active. Files will be deemed inactive if, during a period of two years, the label(s) have not been ordered. Inactive files will be permanently removed from our servers.

LABEL MATERIALS: All Kwik Lok plants stock two basic label materials: Coated one side (C1S) paper tagboard, white, 10pt.; a synthetic material, white, 10 mil. The Yakima plant also has access to coated two-side tagboard, white, 10 pt.

Special materials: Generally we do not accept orders calling for specialty materials. All material must be pre-approved by Kwik Lok; samples of special materials must be provided for tests to test compatibility of materials with our production equipment.

COMBINING LABEL VARIETIES FOR PRICING: Label orders containing more than one label can be combined for pricing as long as the labels are printed with spot colors and ALL colors remain identical. 4-Color process labels can be combined for pricing as long as the colors remain the same and only the text changes. For example, the labels may go from “Granny Smith” to “Red Delicious” to “Golden”.

Labels combined to obtain a lower unit price may be subject to one or more additional charges such as: Press changes, tooling changes, variety changes, etc.

FLOW DIRECTION: Some labels must be matched with the Kwik Lok machines that will be used to close the bag using the closure-label. Machines that are designated as RIGHT HAND or LEFT HAND can only use labels that are produced as RIGHT HAND or LEFT HAND labels. This information can be obtained from the Kwik Lok machine’s serial number plate. The last letter of the MODEL NUMBER will be either R (right hand) or L (left hand). If there is any question, please provide us with the serial number(s) of the machines that will be used to close the bag with the closure-labels being ordered.

DETERMINE FLOW DIRECTION: 872, 873 & 893 AUTOMATIC MACHINES - ALSO 865 (HORIZONTAL PKGS.)

DETERMINE FLOW DIRECTION: 865 AUTOMATIC MACHINES (VERTICAL PACKAGES)
SERIES C COPY POSITION
The Kwik Lok Closure can be glued to any side of the label. This closure-to-label positioning is called Copy Position. Three basic Copy Positions are possible as noted below.

Copy Position #1

Copy Position #2

Copy Position #3

SERIES C CORNER SHAPES

All Four Corners
Square

All Four Corners
3/8” (0.95 cm) Radius

Top Two Corners: 11/16” (1.75 cm) Radius
Bottom Two Corners: 3/8” (0.96 cm) Radius
or
Top Two Corners Only: 11/16” (1.75 cm) Radius
SERIES T COPY POSITION

The Kwik Lok Closure can be glued to any side of the label. This closure-to-label positioning is called Copy Position. Two basic Copy Positions are possible as noted below. Closure is always glued on the corner of the label.

Copy positions apply to Series T, TF, TFM, T-220. RIGHT HAND SHOWN - LEFT HAND OPPOSITE.

SERIES T CORNER SHAPES

Series PFM Right Hand
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long

Series PS
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long
Series P-100
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long

The P-100 is designed to be run through Kwik Lok’s 884 Thermal Printer. The roll (as it comes from the factory) will have the coated side of the label facing up. This is the side on which the 884 will print.

After the closure-labels are printed by the 884 Thermal Printer, they can be separated.

Note: Kwik Lok’s standard label material is a coated one-side tagboard … the 884 MUST print on a coated side. Order coated two-side tagboard if the graphics on the custom printed side of label require coated paper.
Series P-200 Left Hand
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long

The P-200 is designed to be run through Kwik Lok’s 884 Thermal Printer. The roll (as it comes from the factory) will have the back of the label facing up. This is the side on which the 884 will print.

Upon exiting the 884 the printed labels will either be run through a separator for hand closing applications... or recoiled for use in the 865 Automatic Bag Closing Machine. When recoiled and placed on the 865, the front of the label will be facing out, away from the package (the side that will be seen by the consumer).

Note: Kwik Lok’s standard label material is a coated one-side tagboard... the 884 MUST print on a coated side. Order coated two-side tagboard if the graphics on the front require coated paper.

Series P-200 Right Hand
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long

The P-200 is designed to be run through Kwik Lok’s 884 Thermal Printer. The roll (as it comes from the factory) will have the back of the label facing up. This is the side on which the 884 will print.

Upon exiting the 884 the printed labels will either be run through a separator for hand closing applications... or recoiled for use in the 865 Automatic Bag Closing Machine. When recoiled and placed on the 865, the front of the label will be facing out, away from the package (the side that will be seen by the consumer).

Note: Kwik Lok’s standard label material is a coated one-side tagboard... the 884 MUST print on a coated side. Order coated two-side tagboard if the graphics on the front require coated paper.
Series PM-200 Left Hand
Label Size: 7/8” (2.24 cm) wide x 2-3/4” (6.99 cm) long

The PM-200 is designed to be run through Kwik Lok’s 884 Thermal Printer. The roll (as it comes from the factory) will have the back of the label facing up. This is the side on which the 884 will print.

Upon exiting the 884 the printed labels will either be run through a separator for hand closing applications ... or recoiled for use in the 865 Automatic Bag Closing Machine. When recoiled and placed on the 865, the front of the label will be facing out, away from the package (the side that will be seen by the consumer).

Note: Kwik Lok’s standard label material is a coated one-side tagboard ... the 884 MUST print on a coated side. Order coated two-side tagboard if the graphics on the front require coated paper.

©2018 KWIK LOK CORPORATION - ALL RIGHTS RESERVED
Kwik Lok® and Striplok® are Trademarks of Kwik Lok Corporation. The shape of the closure is protected by trademark registrations in many countries around the world.
The **63-DJ and 64-DV Dispensers** are inexpensive, portable, “table-top” models constructed of ABS plastic. With no moving parts the units are virtually maintenance free and extremely simple to use.

**DISPENSER SPECIFICATIONS**

- **Size:** .......................... 9” (22.86 cm) wide x 10-3/4” (27.31 cm) long x 4-1/4” (10.80 cm) high
- **Material:** ................................................................................................................................................ ABS Plastic
- **Approximate Shipping Weight:** (2 per carton).......................................................................................... 4 Lbs (1.8 Kg.)
The 68-DJ and 69-DV Dispensers are models designed to sit under roll stock in the produce department.
The 70-DJ and 71-DV Dispensers are designed to be attached to the valance in the produce department. It can be attached on the face or on the top of the valance.
The 72 Dispenser allows closures or closure-labels to be placed loose in the 72 ‘Cup’ Dispenser.

The 72 Dispenser uses any of the following:
- A and F Closures
- A-M Closures
- AA, AB and FA Closures
- CB-2 Closure-Labels
- MS-B2 Closure-Labels
- PS-B2 Closure-Labels
The **76A Valance Dispenser** can be directly attached to the valance in the produce department.

The **76B Island Dispenser** can be attached to the roll stock stand with one of two brackets listed below.

The **76A and 76B Dispensers** use “C” and CB-2 Closure Labels
APPENDIX
76A AND 76B DISPENSERS

The **76B Valance Dispenser** can be mounted in the produce department three different ways, shown below.

---

**76B-VALANCE INSTALLATIONS**

![Diagram of 76B-Valance Installations](image)

- **Illustration J (Face of Valance)**
- **Illustration K (Top of Valance)**
- **Illustration L (Face of Valance)**
The **Type 814 Dispenser** is constructed of virtually unbreakable ABS plastic. They can be mounted to any flat, clean surface using double-sided tape (provided).

The 814 can be used with any of the following:
- AA Closures
- AB Closures
- AD Closures
- CA Closure-Label
- CB-2R Closure Label

---

**814B w/826 ADAPTER BRACKET SET**

The **826 Adapter Bracket Set** permits the 814 Dispenser to be installed on existing roll bag mounts. Two or four bolts (depending on roll bag mount) quickly secure the adapter bracket to the mount. Two self-tapping screws attach the dispenser to the brackets.

---

**861 ADAPTER BRACKET SET**

The **861 Adapter Bracket Set** permits the 814 Dispenser to be mounted on Island Bag Stands.

The 861 fits stands with a 3/4” O.D. (1.9 cm) pipe; the 861-B fits stands with a 7/8” (2.2 cm) pipe.
The 074 (top) and 075 (face) Valance Brackets allow the 814 Dispenser to be directly mounted to the top or face of the valance above the produce.
Kwik Lok Corporation assumes no responsibility regarding the suitability of the bags for their intended application. To avoid costly errors, it is recommended that the bag sizes be carefully selected and the initial orders kept to the minimum quantity pending confirmation of acceptable operation and finished package appearance.

To assist you in the selection of bags, the following information is offered:

**BAG WIDTH:**
Add the width of product + the height of product + 1/2” (12.7mm).

**BAG LENGTH FORMULAS:**
To determine the proper bag length for a consistently shaped product (e.g. Bread, Bun Clusters, Trays, English Muffins, etc.) follow this formula:

\[
\text{TOTAL BAG LENGTH} = \text{PRODUCT LENGTH} + \frac{1}{2} \text{DIAGONAL LENGTH OF THE PACKAGE END} + 4 \text{ INCHES (101.6MM) (Not including the wicket lip)}
\]

To determine the proper bag length for a loose bulk product (i.e. Oranges, Potatoes, Sugar, Ice, Macaroni, etc) follow this procedure.

1. Fill bag to desired weight using samples of the product.
2. Close bag with the proper Kwik Lok® Closure.
3. Check the length of the bag above the closure. The proper bag length would allow 4 inches (101.6mm) above the closure (not including the wicket lip.)

**NOTE:** Normal variations in size and density of products will occur. Oranges, grapefruit, and potatoes will dehydrate as the season progresses; bakery products vary due to over proofing, and density of ice will change because of certain manufacturing techniques. Therefore these bag length formulas take into account these variations to give maximum automatic bag closing dependability.

**BAG GUSSETT:**
The bag gusset is 1/2 of the product height.

**BAG THICKNESS:**
The thickness of the bag is dictated by several factors. The type and weight of the product is a consideration as well as the quality of the final product as determined by the customer. Thickness ranges are as follows (but not limited to):

- **Bakery:** 0.75 to 2.0 mil (19.05 to 50.8 micron)
- **Produce:** 1.0 to 2.5 mil (25.4 to 63.5 micron)
- **Bulk Produce:** 2.0 to 4.0 mil (50.8 to 101.6 micron)
- **Ice:** 1.25 to 2.25 mil (31.75 to 57.15 micron)
- **General packaging:** 0.5 to 3.5 mil (12.7 to 88.9 micron)
WICKET:
While the number of bags on a wicket can vary, it is preferable to wicket no more than 500 bags at one time. This ensures easier loading, avoids the lumping resulting from the four layers of bag at the gusset section of the bags. For some thicker film bags, the maximum number of bags per wicket will be lower. The film should be free to slide up the wicket as bags are depleted. Special attention should be made as to how the bags are loaded on the wicket.

WICKET DETAIL

FIGURE 1: WICKET SIZE FOR 5" WICKET

FIGURE 2: BAG SPECIFICATION FOR 5" WICKET

FIGURE 3: DETAIL 'A' (optional construction for wicket holes)
The purpose of this article is to provide an aid in the selection of a closure opening for a particular size and type of bag. This article contains a chart that places similar sized openings into groups, and two charts that are used to determine which group a bag fits into. There is also a listing of bag types with generalized notes on closure opening recommendations.

Note: Polyethylene bags differ depending on what agents are added to the resin and what coatings/printing are applied. These variables can impact the ability of the Closer to pack a bag into what would appear to be the proper opening. Due to the potential inaccuracies of the charts, methods of closing and bag variables, this article is only an aid in determining closure opening selection. Official bag sizing recommendations must originate from Kwik Lok Yakima.

Chart 1: All of the available openings are placed in order, beginning with the smallest on the left and ending with the largest on the right. The order of arrangement is determined by the lok opening size. The majority of the openings are placed into groups. Charts 2 and 3 refer back to these Groups.

Chart 2: Use this chart for sizing small to medium sized polyethylene type bags. As an example: A bag with a width of 12 inches (30.5 cm) x 1.5 mil (38.1 microns) falls into Group C. From Chart 1, select the opening from Group C depending on the method of application. Opening #1 for hand applied, Opening GP-3 for Semiautomatic closing and Opening TGR-3 for Automatic closing.

Chart 3: Use this chart for sizing heavy mil and wide polyethylene type bags. See Chart 2 paragraph above for usage information.

Bag Type: General Information

CLAF (Full): Generally closed with a KM-NRP or Z-NRP TGR opening.

CLAF (Partial): This type of bag is of CLAF material with an all polyethylene top. Use Charts 2 and 3. However, the closure opening will not accommodate the CLAF material that can occur if attempting to close a tight package.

Drawstring: (Example: Leno onion bag) Three net openings (N-0, N-0/1 and N-1) are used to close drawstrings depending on size of string and available opening in a chosen series. See ‘Mesh’ below.

Foil: (Example: Bread Bag) Use Charts 2 and 3. Increase the opening size recommendation by one group.

Leno: This rather stiff mesh material requires a large opening. Generally a Z-NRP #6 is used.

Mesh: (Example: soft knitted net potato bag) Generally closed with a K-NRP or KM-NRP TGR type opening. Note: When replacing a drawstring with a closure, it is not recommended that the length of the bag needs to be increased so that there is enough bag top for the Closer to work with.

Paper: (Paper-poly combo): (Example: Bread Bag) Generally a KW-NRP R5B closure is recommended, and in some cases the KM-NRP TGR-6 is utilized.

Polyethylene: (Example: Standard U.S. bread bags) Use Charts 2 and 3.

Polyethylene w/anti (low)-slip agent: (Example: 20 Lb carrot bag) Use Charts 2 and 3. Increase the opening size recommendation by one group if sizing for an automatic closer.

Polyethylene for ice bags (or other cold room environments): Use Charts 2 and 3. Increase the opening size recommendation by one group if sizing for an automatic closer. It is not mandatory, but recommended, to use an opening without side-teeth (Example: Instead of a TGR-5 use a #3 opening).

Polyethylene Master: (Example: Twin-packed bread bag) Typically a KM-NRP TGR-6 or a Z-NRP TG-7 closure is used to close the outer bag of a multiple bread loaf package. The large opening size is used to accommodate up to all bag necks, which includes the inner bags.

Polypropylene: (Example: Bag produced by a Vertical Form and Fill Machine) Use Charts 2 and 3. Increase the opening size recommended closure by two groups. A bag width of 12 inches (30.5 cm) x 1.5 mil (38.1 microns) falls into Group C (TGR-3), but the recommended closure opening is increased to Group E (TGR-5).

Vexar/Extruded Net: These bags are closed with any of the N-style openings. It is best to select the tightest opening possible. It is also recommended that, in most cases, heavy duty plastic be specified.

APPENDIX
TERMS AND CONDITIONS

TERMS: All Kwik Lok Products are sold EXW. Normal terms are net cash 30 days. Custom printed closure-labels, automatic equipment and large volume orders may require payment in advance.

CLOSURE WARRANTY: Closures are warranted to be free of manufacturing defects. Closures are guaranteed to be usable for one-year after manufacturing date. Closure-label warranty is void if closure-labels are stored at temperatures below 32°F (0°C) or over 100°F (37.8°C). We do not suggest closure-labels be stored in metal sheds or buildings that are not adequately protected from heat.

RETURNED GOODS: All products returned to Kwik Lok must be pre approved and issued a RMA number. The RMA number must be on all documents, including the bill of lading and/or cartons. Products arriving at any Kwik Lok factory without pre approval and a RMA number will be refused and returned to shipper.
